What do civil rights mean in Quebec?

SOME judges of the Supreme Court of Canada are indubitably correct but they think indeed that they "refused" to rule on the validity of a Quebec law in a recent case involving Jehovah's Witnesses. They say the law in question didn't apply to the case, and the Supreme Court never rules on abstract and academic questions. Their basic reason for the application that evaded a hot constitutional issue. In their opinion no such issue

at all arose was a rather interesting conflict in the official opinions, inside and outside Quebec of a citizen's rights and a police officer's privileges.

In this case three Quebec provincial constables had walked into a man's home without a warrant, had broken up a peaceful and orderly meeting there, had seized a Bible and books and papers, and had forcibly conveyed the guest of honor of town.

In the Supreme Court of Canada this behavior was outrageous and wholly unjustified. All nine judges agreed that the constables should pay two thousand dollars damages to the man whose home they had violated. Three of the nine noted that the constables' conduct was not only wrong but "clearly criminal," a breach of the criminal Code for which they could have been put in jail.

In all authorities in the province of Quebec, from the humble sergeant who had dispatched the constables up to a unanimous appeal court, the case appeared quite otherwise. No

one seems to have doubted or challenged the basic assumption that the policemen had a right to go into a man's home, seize his property and dispose his peaceable guests. It was for the plaintiff to prove that in acting thus, the constables had acted "in bad faith" and without "reasonable and probable cause."

The constables argued and the Quebec courts unanimously agreed that since they were acting "in good faith" on orders of a superior officer, they were therefore protected from prosecution by the Quebec Magistrates Privilege Act. This law is not peculiar to Quebec. It is a pre-Confederation statute based on British law, and Ontario has a similar one. It confers certain limited protection on police officers who are sued for acts committed in the execution of their duty, and it is most commonly invoked in suits for false arrest.

Counsel for the plaintiff Witness of Jehovah did argue that this law was unconstitutional, but it is a probably lucky for his client that the Supreme Court declined to entertain his argument. It doesn't matter, the court said in effect, whether the law is valid or not, because it has no bearing on this case.

This was not a case of false arrest because nobody was arrested; no charge was ever laid, no offense alleged. If the constables had supposed that the guest preacher whom they ran out of town was committing some crime, they could have arrested him; if he had sued them for doing so they might have invoked the limited protections of

"Grey Gold" of Quebec

Derived from a Greek word meaning unburnable, asbestos was regarded century after century only as a "rock" material - fibrous rock that was unaffected by intense heat.

Today, asbestos finds its way into 3,000 separate products and is perhaps one of the most strategic of all minerals. Without it, much of the equipment of atomic and machine age would be impossible.

Canada produces some 70% of the world's asbestos and the greatest single known source of this valuable mineral is Asbestos, Quebec. This mine alone accounts for one third of the world's supply, of which Canada yields more than \$87,800,000 worth a year. Experts claim ore reserves here are sufficient to guarantee production for at least another century.

In 1954, 479,950 tons of fibre were turned out from this mine. A new 14 storey mill which will raise yearly production to 625,000 tons, is scheduled for completion next spring. Here is a Canadian Achievement of world-wide significance.

Wawanesa Mutual too is a notable Canadian Achievement... 59 years ago 20 farmers in the Wawanesa, Manitoba area formed a mutual insurance company... today Wawanesa protects the property of more Canadians than any other company.

The Wawanesa Mutual Insurance Company

Arthur Valdemar (center) the end of the road. He went to get his taking profits for government contracts.

How Valdemar took Newfoundland to the cleaners

BY ALAN PHILLIPS

When Premier Smallwood learned his trusted financial wizard had use his job to extort a fortune, he was aghast. How had he done it? Where was the money? Here, for the first time, are the facts

ON THE afternoon of April 26, 1964, several hundred Newfoundlanders drove to St. John's airport, outside St. John's, for a glimpse of the Arthur Valdemar, a man who had taken the province of Newfoundland to the cleaners.

The man was usually large, but there he Valdemar was an unusual sight. As the minister of Newfoundland had a colorful reputation, he had been used in Premier Joseph Smallwood, the first powerful man in the province. Now, charged by his direct fund, the premier himself, with securing "very large sums of money from various firms with which he dealt in behalf of the Government of Newfoundland" he would stand as a witness to the end of the most successful business in Canadian history.

"The Doctor" as everyone called him, had come to Newfoundland four years before. Premier Smallwood had heard him praise the island's coal industry down the history of the island's coal industry. Valdemar, a brilliant economist, had built three government-owned plants based on Newfoundland's natural resources. With the help of government loans, he had brought in a dozen new industries. As head of the million-dollar steel development company, the Newfoundland Steel and Ironworks Corporation, he had secured employment by mining and refining iron ore. But all these accomplishments paled before the steadily rising tide of his growing wealth. In two years he had made a fortune of \$475,000—\$100,000 in his pocket. Continued on page 42

Bruce Hutchison's rediscoveries

THE UNKNOWN COUNTRY

III NEW BRUNSWICK

The Anglican culture retained, survived, grew as its own exists. It belongs only in New Brunswick.

ON SEPTEMBER 17, 1916, Col. James Murray fortitiously entered the orders of General Wolfe by driving the last Canadian from the Miramichi Valley—or so he thought. "Ten per cent," he wrote to his commander, "that there is still some a French Man in the New Brunswick and it will be not long if they are ever allowed to settle there again."

The future province of New Brunswick was to be British. Hence, the last British colony of the region.

Now the Miramichi's piping needs and the

town of Miramichi three stories today a common house built by stone fragments and eagles. I waited that Murray could have landed with me on that house and learned from its corner the total failure of his mission. He would have discovered among other things, that the Anglicans, surviving every attempt to eradicate them, will soon take New Brunswick into Canada's second predominantly French province.

My town is pretty well an anomaly and only as the English colonies came from an old English family—fencing against the no expansion of

English power, I finally ventured to ask him how he would enjoy living in a country of an English-speaking minority. He was not sorry of that prospect, not even alarmed.

The ethnic shift, he said was natural, inevitable and, as far as he was concerned, entirely agreeable. He is, however, he had found reliable associates among the French Canadians, and good friends, with much to teach their neighbors of British stock. In another generation, he felt, both sides would be bilingual and still more friendly.

They're freezing people to life

By imitating hibernation

doctors are performing "impossible"

operations and saving

accident victims, feeble babies and

dying old folk.

What makes all this possible

is the newest

miracle medicine: cold

Sliding side organs in chest body process. Some doctors believe. Phases of true hibernation would revolutionize medicine.

BY SIDNEY KATZ AND RON KENYON

PAUL TIERREBERG, who treats Lower Port California, Cal., professes what is probably the most unusual cure in Canada. Temporary means, growth hops, freeze they maintain about the size of one with healthy eyes and reliable teeth. He said he can cut out a rat at four hundred each year. At University of Toronto scientists. For their part, not, the scientists have been diagnosed examining every cell in the ground leg's body, nothing this second of hibernation.

Hibernation is the state of a living organism to slow or body processes almost to a halt. It is a state of suspended animation. During the winter the ground leg melts upon its increased metabolism burst into a furry ball of activity. Its body temperature goes down almost to freezing point, its heartbeat slows and breathing can barely perceptible. An oxygen consumption is negligible. How does the ground leg do it? Nobody knows. One theory is that its ability to hibernate is derived from a body reaction.

If true, one of the scientists can be found and captured in the laboratory. It is possible that experiment of it might give human beings the ground leg's power of hibernation.

If this could be done a doctor's arm of medical research would begin. Heartbeat surgery of heart, blood vessels, brain, liver, lungs and kidney would become relatively easy. Plastic surgery, now regarded as less dangerous in relation, would become commonplace. Finally the greatest breakthrough would be all people and people with organ failure who must now have life-saving surgery because of their poor physical condition.

These benefits can be predicted with considerable confidence because since 1961, surgeons have been using the principle of hibernation on one body system of experiment. The technique they have evolved for slowing down the body processes on less critical than the ground leg's but even so the metabolism heart operation. These techniques are regularly labeled "dry blood" but the correct medical term is hypothermia, which simply means "very low temperature." Using various methods of refrigeration, surgeons have cooled patients down from a normal 98.6 degrees Fahrenheit to 40 degrees.

Most people would die at 70 degrees. At 40 degrees a person lives at a slow motion. The rate of function and breathing are cut or half but oxygen needs are only one fifth of normal. That it has been possible to perform surgery on the heart and blood vessels by putting off the blood circulation entirely for as long as three hours. Undoubtedly, the brain cells would begin to die if the

brain was deprived of fresh oxygen-carrying blood for as little as three minutes. Because of this danger heart surgery has mostly been limited to the past. When it was undertaken, as a rule, by the surgeons, it was done hurriedly through the speed on a few minutes could only by the fact of the heart palpitation because the veins were clamped by hand. With the new technique, it is possible to work with greater ease to learn relieve the inner side of the heart and the veins and arteries outside the heart.

Some of the results have been impressive. On July 23, 1963, Dr. William Gordon (Boston), a research surgeon of the University of Toronto, and Tiersberg, a surgeon living for the first time in Canada. Boston and his assistant did a great deal of the early experimental study on hypothermia, working with many minutes. The first patient to whom he and Tiersberg was Mrs. Tina Stinson, a forty-three-year-old Vancouver housewife who had to be brought to Toronto as a member. She was suffering with cancer disease—a narrowing of the heart valves. For fifteen years she had been in poor health, her weight between 140 and 150. By making her body down to 40 degrees Fahrenheit, Boston and his assistant were able to operate on her valves safely. They did it in seven minutes. Mrs. Stinson later said that she was feeling better. "I never knew how the doctor," she says of her recovery.

It seems when shock would kill

But surgery of the heart and blood vessels is only one area where hypothermia has been a help. It has saved the lives of people in danger of dying from shock caused by major surgery in cancer operations. A case in point is the story of a 60-year-old woman who was admitted to London's Chelsea Clinic Hospital. Her surgery required an operation to remove a malignant tumor that was spreading from her pelvis to her abdomen. She had already had one previous operation for cancer during the previous year. Only a few hours after being admitted to hospital she suffered a heart attack. Her life was hanging by a thread. Surgery could not have been attempted with conventional anesthesia. But with hypothermia, the operation was performed as planned. She survived.

How hypothermia could be used and would not seem to go on long requires some understanding of how shock leads to death. When a person is

INFANTS AND TODDLERS: BABY CEREALS

By Simpkins

Ruth Pinner
Emily Cassell
Honey Home Products

Dear Miss Pinner:

Thank you for the pictures. I have received on Monday and my baby.

Our son Robert is just 40 months old but my doctor says his development is more like a 48 month old. He was started on Honey Cereals and now has graduated to Honey Stained Fingers. We have you to thank for a great deal of his rapid progress.

His many other new wonders of babies the biggest when about nursing and feeding a new infant, but your informative literature has made what was a happy occasion in our house. Happy healthy babies are a blessing to the home and a constant joy to their mothers.

While Canadiana is more an downright pleased with a product they have a genuine concern of saying "think, not" to the reader. This is why there is an array of many hundreds of letters from readers across the country, showing how the one doesn't have, full of nature, animals and people for their life, friends.

And it's not merely letters from our friends. Such as themselves, of thought and care and still goes into their preparation . . . and each a hope of good. Good. But most you always look for this in their friends. We, in their country, look for this in their friends as

THERE'S BEEN A REVOLUTION IN RUBBER

*Now...with Polysar...you get
the toughest treads in tire history*

Most Canadian motorists are now riding on a comparatively new kind of tire—one built of chemical rubber. You will recognize it by its amazing tread mileage; in short, by its performance.

Exceptional tread mileage is just one of a host of benefits resulting from the revolution in rubber. The continuing increase in the use of chemical rubber is establishing beyond question the superiority of Polysar rubber for tires, tubes,

and, in fact for most rubber products.

Polysar rubber is superior because it is tailor-made to meet the exacting needs of any application. In nature basic elements are put together in a fixed and changeless form. In Polysar rubber the basic elements are combined and arranged at will, depending on the need. This versatility, along with new manufacturing skills, is daily giving you more for your money in almost everything that is made of rubber.

Polymer Corporation Limited • Sarnia, Canada

ABOUT 50% OF ALL NEW RUBBER USED IN CANADA TODAY IS POLYSAR
